Junior Software Engineer — AI Document Processing

Job Description

Role Summary

We are hiring a Junior Software Engineer to help build and maintain our AI-powered document processing pipeline, including resume parsing, structured data extraction, and candidate-JD matching.

Responsibilities

- Build and maintain Python services for document ingestion and parsing.
- Work with LLM-based extraction prompts to improve structured field accuracy.
- Write unit and integration tests for new pipeline stages.
- Collaborate with recruiters to refine matching logic.

Required Skills

- Python
- REST API development
- SQL
- Basic machine learning / LLM concepts
- Debugging

Preferred Skills

- Experience with document processing or OCR
- Exposure to Azure OpenAI or similar LLM APIs
