Machine Learning Developer

Job Description

Role Summary

We are looking for a Machine Learning Developer to design, train, and deploy ML/LLM-based features across our recruitment platform, including retrieval-augmented generation and evaluation tooling.

Responsibilities

- Design and implement retrieval-augmented generation (RAG) pipelines.
- Build evaluation harnesses for LLM output quality.
- Optimize model routing and caching for cost/latency.
- Partner with backend engineers to integrate ML features into production APIs.

Required Skills

- Python
- PyTorch or similar
- LLM/RAG concepts
- REST APIs
- Docker

Preferred Skills

- Experience with Azure OpenAI
- MLOps / model observability experience
